**Subject:** Linda Lacroix No Spring bear hunt

Sent from my iPad

No spring bear hunt. Mothers are weak upon waking up. They are thin with little meat from feeding their Cubs. Their Cubs will be left orphan because it's almost guaranteed they will have one or more. And no bear should ever be baited with human food. Our population is growing and moving more into their territories. We should not be encouraging them to seek out human food. Thank you for your time. Please consider No spring bear hunt.

Sincerely,  
Sally J Martin
