PLEASE consider the adverse consequences of this bill. I have been a medical cannabis patient since 2010 and it seems like this bill is taking the entire medical cannabis program backwards. I do not know who or why this bill has been generated when our state has such a model program, that other states emulate.

Specifically:

--I want my health care provider to be the one that determines if cannabis is suitable for me, not based on a list of "accepted" diagnoses.

--The current registry process is working fine after many revisions over the years. Please leave this in the hands of my provider, not a state agency. We've been down this path unsuccessfully before.

--There are times I have needed concentrates for those times of illness exacerbation. Please do not change this.

I apologize for the late response. I was unaware that such dramatic changes taking our medical cannabis program backwards were being considered.
