

Linda Reardon
Orrington
LD 51

My name is Linda Reardon I am a Registered Nurse who is a Trauma Critical Care Nurse of 42 years. I put my license in retirement when the mandates came about so I could continue to help people with information and facts

I started to question the information being given to us all after listening to Fauci and the CDC director of Maine after 2 presentations. I decided to do my own research and began my journey for true information. My research started with the mask mandate. I researched and found Fauci's information to be false and Shah as well. The South Korean doctors had found this Corona virus to be surface to face and not air borne unless the person was actively ill and coughing in the face of another person. Good hand hygiene was the recommendation. We were at that point told to mask up. Masks can NOT and do not stop any virus this has been proven in multiple studies around the world. Masks do cause hypercapnia, hypoxia, irreversible brain and lung damage, eye damage, skin damage, periodontal disease and spread bacteria and viruses everywhere because of the touching of face with hands and other surfaces after messing with adjusting the masks. This is the short list they decrease oxygen especially in asthma and other chronic lung patients. For a virus with a 99.8% survival rate and medications that cure it easily Again so many studies have proven this time and time again. This information is now available to everyone. The vaccines are now found to be deadly and they were being investigated by Virologists and Infection Disease doctors worldwide. This is something doctors and nurses thought from the beginning but were told much different information from Shah the CDC director and Big Pharm. The dangers of the vaccines are again readily available by well known doctors and researchers. The damage and deaths that have happened from the lockdowns are now coming out and will be for years to come. The healthcare mandates have also caused deaths and completely ruined the healthcare of the state of Maine. People not going to the hospital who need to because of the horrible if any care they are receiving or no care in most situations. The hospitals are understaffed and have unqualified staff if they have any staff at all. They are staffed by travelers who do not care about us they are on a 3 month assignment then gone. If they finish their contracts many are leaving and not finishing contracts because the work environment is so bad they leave. There is a nursing home down 8 staff members on one unit because people leaving before they finish orientation. NO CARE FOR PATIENTS BEING GIVEN NO STAFF Surgeries being cancelled oncology not able to treat patients no staff doctor or nurse. 2 trauma hospitals in the entire state and one in such financial hardship they are selling out to cooperates. So healthcare will be even more expensive and worse than now. I could go on for hours with the situations and cases I have been told in the last 3 years Right now one of the trauma units has 3 wrong full deaths lawsuits pending And more coming up. It is overtime to stop these horrible healthcare mandates. I have one more point to make. Our state has NOT been getting medical advice from a doctor of medicine for the past few years but from a doctor of economics who was fired in his last job as CDC director in Illinois for letting Legionnaires spread through the VA homes and he did nothing. Fired by Senator Dick Durbin. Hired by Janet Mills. We can not nor have ever been able to find a medical license in the state of Maine. There have been many great medical doctors in our state fighting these mandates because of the damage and deaths occurring because of them and they were rewarded by losing their licenses. Please research the right sources and get the facts. If you do you will stop these mandates now and realize this is not about health its about politics
