West Gardiner
LD 94

As a medical marijuana patient as well as someone who works in the medical marijuana industry I strongly oppose LD 94.

Concentrates are the backbone to the medical marijuana industry. Without them, many patients would suffer greatly. Concentrates provide a clean safe, affordable delivery of medical grade marijuana as an alternative to the age old way of smoking the flower. Not only do our lungs appreciate the concentrates, but the surrounding environment does as well. It is absolutely insane to me that we are

considering stopping the legal use of edibles that enable a patient relief via a gummy but our current health system allows the prescriptions of deadly narcotics regularly. As someone who was prescribed both narcotic pain medication for debilitating endometriosis and ovarian cyst pain for 10 years, as well as benzodiazepam and a dangerously high level of hormones that put me in a chemically induced menopause state for my twenties. An entire decade. I would never choose to go back to that treatment protocol, who would? I only use medical marijuana now and have way better results than I ever did with big pharma.

Please consider the serious implications this bill would put on our medical patient community.
