I am for the proposed legislation to restore religious and philosophical exemptions to immunization requirements. Our healthcare system is broken and has led the "sheep" to slaughter.

I worked as an RN in Massachusetts from 1986-1999 until moving to Maine. I followed all the rules and believed in the system, but not anymore. The original premise that I was taught was that removing liability for pharmaceutical companies from being sued for vaccine injuries would open up the door for development of cures for devastating illnesses. That didn't happen. "Big Pharma" got richer. We were all kept "sick" and in need of their "life saving" and "life altering" drugs. The "Covid vaccine" was the eye opener for me. I have friends and family that have taken that shot and have suffered ill effects. One got Bell's palsy, one had vertigo, three had heart attacks, one had a fetus with severe defects. Can I prove that the "vaccine" was the cause? No. Do I have a strong suspicion? Yes!! what about all of the increases in cancer that are turning up left and right?

Everyone has the right to make their own healthcare choices. It is not a government or pharmaceutical company decision. We need to return to an honest healthcare system. Please consider ending all of these mandates.
