I find it highly suspicious of everyone involved with this to be pushing to end flavored vapes when, the tobacco industry kills hundreds of thousands yearly. Some that have never smoked.

I want to know how anyone involved with this sleep at night. How are you going to push me back to cigarettes, and pipe tobacco? Who is paying you to take this stance and are you prepared to deal with the karma of thinking you can choose what's best for me? Any government representative who would force me to choose one poison for another cannot possibly represent a public they have been elected to serve.
