I am a voting citizen of Maine and am strongly opposed to this bill. This bill makes the life of my son invalid. He had Potter's Syndrome and died after living outside of the womb for only 45 minutes. He was not meant to live outside the womb but his life was precious. He was breathing, growing, his heart was beating and his brain was developing. This bill says to this generation that their lives do not matter because it's all disposable. The only difference between the day before my son was born and the day he was born was that his lungs had not developed. The difference between the day my other children were born and the day before was simply location but they continued to live.
