

LD1614 An act to require an ultrasound and certain counseling before an abortion

I am writing today in support of LD1614. Over the years society in general has tried to teach us that an unborn baby is a fetus, a group of cells, just an unformed blob. A person who's never been pregnant before, a person who is immature and unaware of what life's journey can bring, could very well have no idea about the formation of the human body inside the womb. It's not always real to a person at first, sometimes not till after birth. An ultra sound puts a face with a name so to speak. The mother can see what is forming inside her womb. Seeing for her own eyes the shape, the growth, the heart beating inside her, she can make a critical decision fully informed.

Thank you for your service and attention. Please vote yes on LD1614
