

Roberta Manter  
Fayette  
LD 1614

Please vote LD 1614 ought to pass. Shouldn't a woman be entitled to know all the facts about what she is about to do before making her decision whether or not to abort her baby? Why would an abortion clinic not want a woman to see the ultrasound images? They say it rarely makes a woman change her mind, but that's not what we hear from pregnancy centers. What harm is there in letting her see the images if it will not change the outcome as far as the abortion clinic is concerned? When you as a legislator are preparing to vote on a bill, you are required to listen to live testimony and to read written testimony regarding the bill. You must consider evidence both for and against the bill, as well as other information neither for nor against. Why? So you can gather the facts and make an informed decision. Shouldn't a woman be given the opportunity to gather the facts and make an informed decision as well? If you vote against this bill, you are saying that women should not be allowed all of the available facts, or that women cannot be trusted to make a wise decision if they are given all the available facts. That is sex discrimination. Please support women by voting LD 1614 ought to pass.
