

Delene Perley  
Portland  
LD 2261

Maine is badly affected already by climate change. Automobile emissions are part of the problem. We need to move away from fossil fuels to electricity. But legislators are not equipped to judge anything more complicated than that. Stop this last minute bill! I speak as a concerned individual and a member of a church that is agreement with me. Legislators are not prepared to evaluate every little change proposed, nor should they want to. Leave that to a committee or board with expertise. Save our environment! I am so proud of our cleaner cars than those in some other states. But we need to do better. Vote no on LD 2261. This is not the way to legislate.
