LD 2261

It has taken many years by many Mainers' efforts to get where we are in implementing Clean Car Standards. This is no time to go backward. Evidence from Maine and around the world is showing a rapidly worsening Climate Crisis. The Car Standards allow for continued purchase of gasoline cars while helping us reach our State approved requirement to rapidly reduce climate change gases. Therefore, I strongly request that you DEFEAT LD2261!!!

We have waited long enough!
