As a member of the Commission, I fully and wholeheartedly support this Bill in its entirety. As a matter of urgency, I look forward to continuing the crucial work we started, so that we can support those who are suffering from illnesses that shorten life expectancy and, through outreach, educate those who are at risk of developing illnesses, due to their exposure to harmful chemicals. Furthermore, to provide acknowledgement to families of those already deceased, that their loved ones are not forgotten, and did not die in vain.
