Augusta
LD 2283

I am a resident physician in family medicine in Maine and am incredibly concerned about our states gun legislation. I am strongly in support of LD 2283. I work with a variety of patients and families, of which many lives have been changed forever by inadequate safety planning of firearms. I also see many patients for a myriad of psychiatric conditions and I have no current ability to restrict suicidal or unstable patients access to guns during vulnerable times in their life. Please help the individuals and families seeking resources in our state by passing LD 2283. LD2283 would enable us to do our job of enacting safety plans with our most vulnerable patients.
