For 20 plus years I have based my personal aircraft at the Eastern Slopes Regional Airport (IZG) . I'm really concerned the bill that is being proposed would create potential safety issues of not having the airport grounds mowed on a regular basis. By not mowing, it will foster wildlife to feed on various insects, rodents etc within the airport environment. This could cause wildlife to possibly cross the runway, taxi ways etc leading to a possible injuring to both the animal and pilot and death ! In addition, by not mowing there is the possibility of not seeing the wildlife in the brush the pilot may not have time to abort the takeoff/landing until the last moment before creating a potential accident.
