ALM Ortho (Scarborough, ME) manufactures state-of-the-art patient matched orthopedic implants for limb restoration and trauma reconstruction.

We were fortunate to receive a domestic trade grant from DECD's Maine Jobs & Recovery Plan program.

This funding allowed us to significantly jump-start our device development and provide prototype products to leading limb lengthening/reconstruction surgeons throughout the United States. As a result of their collaborative efforts, in concert with the ALM engineering and technology team, we have been able to develop a market leading product and strong competitive position in this relatively new, but burgeoning market of bone-anchored osseointegration implants.

We welcome any of the committee members to visit our offices and see how our unique, technology driven orthopedic implants are fundamentally and favorably improving lives for the patients.

I believe it is vitally important to continue this program in the future for Maine businesses.
