I am astonished that there are five bills aimed at eliminating NEB when it is clear that we NEED NEB for the benefit of consumers and the climate. NEB provides cost savings for all ratepayers, increases equitable access to renewable energy savings, strengthens the grid as it reduces peak (polluting) demand and transmission costs, decreases electricity loss, and it reduces greenhouse gas emissions improving air quality.

NEB facilitates the transition to a renewable energy economy, thereby mitigating climate change and the damages it causes, and it immediately benefits consumers. Eliminating NEB ensures environmental damage, furtherance of the rate of climate change, and depletes the pocket books of ratepayers on a daily basis. I object to ALL bills trying to eliminate NEB.
