LD 646

I urge you strongly to vote OUGHT NOT TO PASS on LD646, Resolve, Establishing the Commission to study unregulated storm water pollution. First of all, "good luck with that!" Your bill designates "unregulated storm water." All storm waters that I know of are unregulated. Except by God. This BROAD statement would indicate that it can be manipulated. One person's unregulated is another one's "natural order of things." Climate is nature. We have VERY LITTLE CONTROL over storms or the water that comes from them. I'm sure there will be a LOT OF MONEY poured into the "studies" by people who make their living with program, projects, or devices to "help you clean up your issue. Good money after bad. No matter what would want to do to fight the climate, you will only throw money into the muddy waters! Climate is always, and has always, changed. Over and over, in perpetuity. To think that whatever we do will really make a huge difference is ineffectual and arrogant. Again, I urge you to vote OUGHT NOT TO PASS on LD646. Save our relatively poor state a lot of misspent money! Thank you.
