

Jesse Haskell
Haskell Farm Palermo
LD 810

Hello members of the Energy, Utilities and technology committee, I have also submitted testimony for LD 596 so I will keep this short. If you read my other testimony it outlines that my family dairy farm will be greatly impacted by any potential transmission line routes. The original proposed routes both affected large hill top western view properties that my family maintains as part of our dairy farm. Regardless of affecting my family I feel that LD 596 and LD 810 are both ways of driving this proposed line through without the public's approval or knowledge. As I stated in previous testimony if any of you are willing to take the time I invite you to take a tour with me to the properties that a proposed line would affect. If any of you have a conscience you would see that a large transmission line would turn our area into the disgraceful scenery that is continuing to unfold in the town of Windsor. I also invite you to look at the old farm land surrounding the Maxcy's Mills substation. This is not for our own good, it is a money grab for private equity firms, and foreign owned utilities, and approved by people who have been misguided about how renewable energy is going to save our lives. My contact information is attached for any of you who would like a tour of the lands that could potentially be destroyed and devalued by this committee.
