My husband is a state police officer and I am a teacher. Our income is low. When we had our son a year ago we used Clinical IBCLC services as I was struggling to breastfeed. Formula is expensive and we were trying to save money by breast feeding. My son had significant lounge and lip ties which were discovered through our work with Clinical IBCLC services. I was also able to almost solely breast feed thanks to support and services I was provided. We couldn't have afforded this support without our health insurance. These services made a huge difference in our first year as parents.
