There is no way women's rights should be taken away from them. Like men, women should be able to make their own choices about their own bodies.

Instead of stripping more rights away from women, we need to provide MORE protections for women, to ensure that women have access to safe medical treatments and that the medical care professionals are free to give that medical treatment without fear of prosecution.

Anyone trying to Repeal Laws Allowing Abortion and to Criminalize Abortion is trying to exert power and control over other people and women in particular. They have no right to control others. They need to focus on protecting the residents of Maine from things that actually cause harm to so many residents such as easily preventable infectious diseases, mass shootings and suicide.

I, like all men, should not have any say over what a woman can or cannot do with their bodies. That is a fundamental freedom that needs to continue to be protected under Maine law.
