Hello,

I want to enthusiastically urge our Congresspeople to support this bill. The research is clear that so-called "ghost guns" are the cause of an increasing number of deaths across the country. The lack of traceability of these weapons means that it will be much more difficult to bring perpetrators to justice. As a public school teacher, I am keenly aware that it is likely easier for my students to procure an unserialized, 3D-printed weapon than it is to get a firearm through more traditional means. Please pass this bill to keep the people of Maine safe.

Thank you for your consideration.
