LD 1126: An Act Requiring Serial Numbers on Firearms and Prohibiting Undetectable Firearms

I do not support this bill, and words cannot adequately convey my complete and utter contempt for it. It's an ineffectual proposal, with significant technical issues regarding implementation, flies in the face of over 300 years of established tradition and conduct. It also creates the absurd requirement for one to undergo a background check for their own firearm, that they JUST MADE.

The fact that the bill writers believe that offloading the serializing requirement to an SOT is a clever workaround to the idea that people might just do the serializing themselves, is ignorant to the point that there are few to none SOTs that offer such services to the public.

How the citizenry conducts themselves with the exercise of their civil rights, when it impacts no one, is of no concern to the government. To demand registration, and ban the possession of raw materials with vague definitions is nothing short of a blatant repression of our right to arms AND our right to personal creativity.
