Maine is already struggling with PFAS contamination in the air and soil and products imposed on the people of this state by its government and we don't want anymore of this. Corporate profits cannot be allowed to destroy and pollute our shared air, water, earth and our bodies. We are literally drowning in plastic refuse that has now been found within ours and our children's brains & blood. There are viable alternates to plastic bags that can be used like nontoxic, nonpolluting containers made from mushrooms, hemp and other materials. Please vote no to LD56, LD69 & LD1122
