Topsham
LD 935

I STRONGLY URGE you to vote OUGHT TO PASS on LD935, Resolve, Directing the Department of Environmental Protection to report on air and soil chemical and metal levels and on soil panel farm sites. This would seem to be a very obvious decision. We should all be concerned with how these solar fields of plastics and other metals are affecting our environment. Sometimes the "cure" is worse than the "cause." The cause being that these solar panels will cut down on the need for fossil fuels to produce energy and the cure being adding toxic chemicals into our environment that will lead to possible mutation and death of species, even human species. If we want to be good purveyors of our planet we must think of the health of our future planet. This "cure" sounds like it may be poisoning our planet. Certainly nothing will grow under a solar panel as it takes sunshine to grow vegetation. Think of all those metals and chemicals going into our rivers and streams and killing all the fish and growth in the waterway. All BAD aspects of a system of energy collection that is poor at its best. Especially in our sunlight starved state. so, I URGE you to vote OUGHT TO PASS on LD 935, to find out what we're up against with these solar fields. Thank You!
