

Dear Chair Lawrence, Chair Sachs and Fellow Citizens of the EUT Committee.

Frankly I only wish I could have seen the original bill which this bill refers to. I, certainly would have opposed it as I do this bill. **LD 1240 An Act to Align the Schedules for Climate Change Protection Plans and Grid-enhancing Technology Reviews with the Integrated Grid Planning Process**

Is this bill something of a fact-finding witch hunt?

“The expected effects of climate change on utility's assets?” Talk about vague and immaterial word salads. Has everyone gone mad?

After this, am I going to have to report how the expected effects of climate change is going to affect my house or how about how the expected effects of climate change on airplane travel, or expected effects of climate change on “little red riders”

Pure nonsense is usually hard to come by, but this attempt to push a narrative certainly qualifies.

How about we ask the transmission and distribution to submit an immediate plan on how to reduce electricity costs by using reasonable and logical thinking?

The Maine PUC just might be relishing in a tongue and cheek moment with this reveal of what had previously came from a legislative brain fart.

Thank You Clayton McKay Dixfield, The Only One
