I am a nurse and I believe that we need to alter the vaccine schedule. If you look at the schedule from the 80's and now today's, you will see that the number of shots that has been added is astronomical!

I have vaccinated children, but I did not do all of the shots and I did not give them to my children as babies. There are no studies that support the safety of all vaccines and the gold standard of science is not applied to vaccines. Pharmaceutical companies are exempt from vaccine injury and pediatricians are given bonuses based on the percentage of children in the practice who are actually vaccinated. This concerns me greatly. I think that vaccines can be great, but until certain changes are made I would support a vote to alter the schedule. Thank you.
