Multiple U.S. Surgeon Generals have affirmed the important benefit of public water fluoridation. It is good that discussions are being had on long term effects. We do not truly KNOW of any true negative affects. We do KNOW that without such measures, communities experience greater rates of tooth decay which adversely affect the populations that do not have access to routine dental care.
The overwhelming majority to dentists support water fluoridation- which directly reduces our business!! What other profession tries to put itself out of business??!!
Thank You, L. Homicz, DDS
