LD 1604

I am writing to urge the Committee to support LD 1604. PFAS have already wreaked havoc on some of Maine's organic farms when unknowingly, farmer's spread contaminated sludge on their fields. LD 1604 would protect Maine's waters from PFAS in landfills through setting effluent discharge limits and requiring further PFAS testing for landfill leachate. If passed, this bill would enable greater transparency, and strengthen protection against soil contamination.
