I oppose changes to the current medical program, because mandatory testing does not protect patients. As someone who has worked higher up in large scale MSO's in other states with mandatory testing I can confidently say it would only impose fees that will put many small caregivers out of business in the legal market and possibly drive them back to the black market. There are many ways to remediate samples before sending them to testing to get dirty batches to pass testing. Mandatory testing only gives patients a false sense of security and allows bad actors to continue to distribute unsafe products. The only people who stand to benefit from mandatory testing are the labs that will see a massive increase in revenue.
