

In the Definition section of this proposed bill, the definition of what the project is to address speaks to vital need. All of the interventions are necessary. Climate change is affecting our homes, food, air, water and health and our ability to slow global warming. My knowledge and experience as a former nurse, Red Cross Volunteer and city council member speaks to the critical needs this bill seeks to address. This work must be done and it is appropriate to have those who contributed to the problem help pay to fix it. Please support this bill.
