Livermore  
LD 104

1840 is incredibly important to SUPPORT but 104 and 1847 need to be OPPOSED because if they pass, it won't matter what good is done by 1840.

Many of us will be forced to shut down due to the costs imposed by these tests and tracking / all that goes with it. One test costs \$505 and though you can test by "batch" a "batch" is defined by being the same strain. Caregivers that operate on a small scale and like myself have 7-8 lights with 7 strains growing. We will not be able to grow like this. This pushes the industry to mono crop and focusing on yield rather than full expression.
