As a small business that would be directly affected by the proposed bill, I strongly oppose the proposed regulations in this bill. The additional costs would put me out of business indefinitely. All it would do is drive up costs, without any improvement to quality or safety of the product. These regulations have failed in other states. It's been driving the small businesses out, leaving the large corporations to reap the benefits of an industry they didn't help create. Why would we bring this to our medical program? It is already the nations best; this bill aims to squander that.
