I am a grandmother of a Grandson who has Autism and it is hard for him to make friends with the Bonny Eagle High School Robotics Team (BERT) he has experienced a whole new career path to look into after high school. It has brought out his confidence, and this was his first year on the team and he was part of the drive team and he was a human player. I wish you all could have seen him and his teammates when they won at District and brought home a banner and got there medals. These programs will help in the future for our young students gain confidence and be really good at the jobs that will be out there for them for they all ready have a understanding of how robots work and how to build ones better to save people's lives and explore the Universe that is still unknown to us. So please pass this bill to help the next level of robotic builds. This team placed 3 out of 16 teams in Maine
