Metrc was conceived and designed in a different time and market landscape. It's use has proven defective and corrupt. Hudak et al have been party to deceptive practices. Neither grower nor consumer wants a system like metrc. This bill is alive only because private interests want a return on their investment. We should not cling to a mistake simply because a small group pf people spent a lot of time and money on it. This bill is poison. Please end It's progress and toss it aside forever
