I moved from MA to ME in large part for easy and accessibility to medical cannabis. My ability to be treated for multiple chronic health conditions has dramatically impacted my health in the most beautiful way. Maine is unique in it's support of local/ small business and grassroots ethos. Added testing without proper infrastructure will negatively impact peoples ability to receive the medical care I and others desperately need. With out facilities and staff and funding this bill will do more harm then good to the people. I moved to Maine because I was inspired by the people and the land and the freedom to not be corporate.
