LD 1868

I am writing to express my support for LD 1868. I would love to see the state get to 100% clean energy as soon as possible, and it sounds like 2040 is achievable given some good planning. The finding of the "Pathways to 2040" study showing that meeting this goal could reduce household energy costs by about \$1,300 is very exciting. That makes sense now that solar has become the cheapest energy source over recent years. And it seems clear that this trend will continue, making the achievement of 100% clean energy an increasingly smart move economically. But not only will it save us money, it will also create jobs here in the state. AND help us reduce greenhouse gas emissions! How great is that?! I hope you will move this bill forward and do all you can to see that it passes.
