This bill is a regression of the years of work this country has put into safe and affordable health care for all. Everyone in America should be allowed to receive the proper healthcare that they need, regardless of their identity. I have trans friends whom have had their lives changed because of gender affirming care. Why should their ability to receive care be less than mine or yours? Healthcare is a human right that transcends identity, sex, religion, or gender, and trans people should not be exempt from this category. I urge you to think about this bill critically and reframe the legislation as if it were affecting you or someone you loved. You may not be so eager to vote for such a bill.
