Gardiner  
LD 1567

I am writing this in favor of LD 1567. First of all, irradiating cannabis could change the molecular structure of some cannabis and make it hazardous to human consumption. More importantly, our current legal situation enables large MSOs to remediate prior to testing which is not only dangerous but unfair to smaller producers who strive to produce “clean” cannabis. I strongly suggest that the Committee for Veterans and Legal Affairs vote in favor of this bill. Thank you
