LD 1730

I am a concerned citizen, have worked as an environmental scientist and would like to register my support for LD 1730. By creating a new category for small plug-in solar generation devices, this legislation offers an easy, win-win-win scenario. It is a win for low-income households as the solar device can offset high electricity bills. It is a win for the environment through the use of clean solar energy. And it is a win because of its regulatory simplicity. What's not to like? Thank you in advance for your efforts to guide this bill through the full legislature.
