LD 1730

I am writing in support of LD 1730. This has the potential to allow homeowners or renters to produce their own sustainable electricity and supplement the amount of clean power available in our state. Those of us who use electricity to recharge our cars and run our heat pumps have seen an increase in our electricity consumption and cost. It would be great to have this option to offset these increases without having to make a large-scale investment in a solar array. Please pass the bill.
