LD 1730

Please support LD 1730, allowing Maine utility customers to install low-cost Plug-in Solar to reduce their utility consumption from the grid and monthly energy expenses. These systems are lower-cost (per kWh) than rooftop solar, can be easily deployed, and would help the average utility customer to reduce their energy consumption by ~20%.

This offers benefits both to the individual utility customer and to the grid as a whole. These systems can help fill a critical gap in our clean energy transition, encouraging widespread installation of small solar arrays and helping renters and low-income households to participate in reducing their energy costs with solar.

Thank you for supporting this measure.
