LD 1730

Dear Legislators,

I am writing to urge you to pass LD 1730.

This is an innovative way to allow citizens to make their own decisions AND lower their energy bills - without impacting the electric bill of any one else.

Plug-in solar technology has been widely adopted throughout Europe. These small compact systems have been modified to US electrical standards and their installation can be installed anywhere with the help of an electrician. Since they are safe, our current rules need to be updated to allow people access to this technology to lower their electric bills.
