I live in Penobscot and urge the Committee to pass this bill to make small, portable plug-in solar devices accessible to all Maine residents.

The climate crisis is real and Maine has an official goal to transfer to renewable energy by 2040. These devices can help meet that goal and reduce our reliance on fossil fuels! They can also help address the affordability issue for energy in our state.

I use oil heat but would be interested in knowing more about these devices.

I traveled to Greece last year where every rooftop in Athens had a solar waterheater .

Please pass this bill for the health and safety and affordability of all Mainers.

Thank you ,  
Marguerite Williams
