I have read through the concept draft amendment and have concerns about the tax section. To the extent that the proposed entity supplants the commercial power company would remove a great deal of property from local property taxes. Because of the design of the grid, this would adversely affect service center towns/cities, who already have plenty of non-profit owned tax free properties combined with higher needs of public service that are funded through property taxes. The state needs to be helping towns intentionally in this area and not taking away their taxable property.
