LD 2115

Testimony in support of LD 2115 on 01/28/2026. Legislatures must ensure that individual homeowners and communities across Maine have full access to well water testing funds to test and determine if their drinking water is safe and avoid PFAS exposure in communities dealing with contamination of these PFAS “Forever Chemicals.” PFAS has contaminated water ways, soil and groundwater flows that knows no human boundaries making its way through towns across Maine, contaminating individual homeowner's private drinking water wells along with public community wells. This bill will help all those effected who are dealing with the aftermath of these toxins leaching from numerous municipal waste disposal sites, nearby farms, and from chemical spills in Maine have been shown to present serious, long-term threats to soil, groundwater, air quality, and public health. Please vote to support this bill that helps taxpaying individuals & communities.
