LD 2141

LD 2141 is critical to protecting Maine lakes. Maine lakes are one of the most important assets of our state. They bring people and billions of dollars to our state. They are the cornerstone of our tourist industry. Each year thousands of volunteers through lake associations, work to preserve these incredible resources which are at significant risk. I personally have worked hundreds of hours with shoreland owners educating them through LakeSmart evaluations and lake restoration projects. My fellow members of the Kezar Lake Watershed Association have spent similar hours working to protect the lake. The state needs to do more to protect these valuable assets, and 2141 is a NO COST to the state or the people of the state, to do that. Why would any legislator in Maine give money to bottlers over the people (and environment) of Maine is beyond comprehension. No other state in the country does that. LD 2141 is a Maine common sense solution to a problem!
