

Amy Fenwick
Bangor
LD 2106

Dear Senator and Representatives,

I am writing in support of LD 2106.

As a Trauma Surgeon and General Surgeon I recognize the importance of allowing hospitals to be a safe place for patients to be treated. Whoever walks through a hospital doors gets treated and take an oath to this effect. There are also laws that prohibit us from refusing treatment. Hospitals should be a place for healing, where patients and families receive medical care and support. It should be a safe place for both patients and families. This bill will allow us to continue to care for our patients and their families without fear. It provides a safety net for the community to receive urgent and emergent care without repercussion. My role, and the role of my colleagues is to care for the health of the community, not to provide information or to provide access to records or patients without requisite warrants. We need to unify to protect the health of our entire community and to support the caregivers .
