State House and Senate members of the 132nd Legislature. I encourage ya'll to give this bill great consideration of people's right to second chances, especially actions and "crimes" that shouldn't even be a crime at all anymore since the 2016 referendum that legalized possession, cultivation, and sales of Marijuana.

Keeping a record of something that is considered legal in our jurisdiction creates bias and or prejudice against those with records of possession and cultivation, and that makes it highly unfair for those to be considered for jobs to sustain themselves or their families. Keeping pointless records for something legal now goes against the Maine laws regarding Cannabis legalization and Anti-Bias for actions or ways of life that don't pose a threat of instability to our society.

This law would give people with offenses related to the possession and cultivation of such substances that are now legal a fairer and more legal chance at better lives and opportunities.
