LD 1847

I am a medical cannabis patient that has very specific needs when it comes to cannabis. Unfortunately these needs have only been met, after years and years of searching and trying different solutions, by the small craft medical cultivators that take the time and the care to focus on specific genetics over what can produce the most, as many of these genetics are hard to grow, do not produce large amounts, and require smaller more dialed in environments. All of which would never be possible with the added costs of needless testing guidelines and parameters that would absolutely ruin any small business. For the first time please think of patients over profits and do NOT allow LD1847 to pass. Thank you.
