

Daniel Malcolm  
Brownfield  
LD 1847

Hello. I am a stakeholder in the Medical Program and I am encouraging representatives firmly oppose LD1847.

LD1847 proposes to implement costly and needless software, METRC, that burdens the cultivator with non- reusable tags and computer data entry requirements that has, historically, caused more problems than it has solved. This can be researched with very little difficulty. I do not want our state to change course, in this regard, after almost two decades of a working and relatively issue-free track and trace model that utilizes simple trip tickets and responsible record keeping

Again, as a stakeholder in this program, I encourage representatives to oppose LD1897.
